TIPS

- Perform Visual Evaluation at an early age, there are multiple visual symptoms that can occur with patients with dyslexia and it is important to know that each patient is unique.

- Evaluate the binocular vision abnormalities and the oculomotor function.

TIPS

- Vergence dysfunction and accommodative disorders could be commonly noted.

- Manage the non strabismic binocular vision anomalies along with oculomotor training by providing vision therapy, which could be modified based on the patient's ocular deficits.

TIPS

- Evaluate for binocular function and advise vision therapy before prescribing colored lenses.

- Most of dyslexic patients have good coping capabilities, and it is important to understand the coping mechanism of the patient and to investigate other talents through which patients can cope.

Wow, what a cool content
